"It ' s hard to align with money if you think that it is evil and nasty. But once you come to an understanding that money is neutral, it ' s easy to see that having money does not necessarily deprive somebody else. There ' s no reason why you can ' t be very rich and still be an extremely spiritual and wonderfully generous person—aligned to the God Force—with a huge heart, and compassion for everyone you meet." — Stuart Wilde

important mathematical connections between mathematics and the real world from ancient times to the present. The author then describes some of the contemporary applications of mathematics—in probability theory, in the study of human behavior, and in combination with computers, which give mathematics unprecedented power. The author concludes with an insightful discussion of why mathematics, for most people, is so frustrating. He argues that the rigorous logical structure of math goes against the grain of our predisposed ways of thinking as shaped by evolution, presumably because the talent needed to cope with logical mathematics gave the human race as a whole no evolutionary advantage. With this in mind, he offers ways to overcome these innate impediments in the teaching of math.
