Financial mathematics In all of the following, t is the time in years and i is annual rate of interest, depreciation or growth, expressed as a decimal or fraction (so that, for example, i = 0.08 represents a rate of 8%)1. Compound interest: F = P(1 +i t F = final value. P = principal) Present value: (i t F P + = 1 (F = final value. P = present value)

Formulae and Tables - St. Clare's Comprehensive
These formulas only state in another form the assertions in the table of derivatives. Integrals with a singularity [edit] When there is a singularity in the function being integrated such that the antiderivative becomes undefined or at some point (the singularity), then C does not need to be the same on both sides of the singularity.
