Remember that if the "push" phase of the jump takes a quarter second then Superman's acceleration must be 250 m/s/s. Then we can use the following formula and plug in acceleration of 250 and time of 1/4th.

$$\text{distance} = 1/2 \text{ acceleration} * \text{time}^2.$$
$$\text{distance} = 1/2 (250) (1/4)^2.$$
$$\text{distance} = 125 (1/16)$$
$$\text{distance} = 7.8 \text{ meters.}$$

The Physics of Superheroes. In The Physics of Superheroes: Spectacular Second Edition, Professor James Kakalios explains in a fun and accessible manner a broad range of physics, from Isaac Newton to the transistor – but there's not an inclined plane or pulley in sight! Rather, all of the examples come from superhero comic books and in particular, those cases where the superheroes get their physics right!
